DETAILED ACTION

Response to Amendment

1. Applicant's amendments to the Drawings filed 5/25/2007 has been noted and entered. Furthermore, applicant's remarks regarding the previous restriction and non-final office action being directed to cancelled claims 1-13 is persuasive. The preliminary amendment filed 1/22/2004 canceling claims 1-13 and adding claims 14-32 was overlooked by the examiner, and is now acknowledged. Therefore, previous restriction and non-final rejection are defective and withdrawn because they are directed to cancelled claims 1-13, as per the preliminary amendment.

Election/Restrictions

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
- I. Claims 14-24, drawn to an apparatus comprising a conditional access module and an adapter for adapting from a second form factor to a first form factor, classified in class 710, subclass 62.
 - II. Claims 35-32, drawn to a conditional access module implementing multiple protocols, classified in class 710, subclass 11.
3. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP §

806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the adaptor can be inserted in all readers of the NRSS-B type, not necessarily the conditional module as claimed. The subcombination has separate utility such as reading data from NRSS-B type cards directly.

The examiner has required restriction between combination and subcombination inventions. Where applicant elects a subcombination, and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

4. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
